## TOP VIEW

## HELPFUL HINTS

- Night Vision does not work through glass. The glass will reflect the IR light signal.
- To see in the dark, make sure to press and release the IR button.
  - There are multiple IR levels (press repeatedly to adjust).
  - The higher the IR setting, the further you will see in the dark.
- ALWAYS make sure to turn off your binocular when not in use.
- You can adjust auto shut off under the mode setting (reference Manual).
- Always power off binoculars before removing the memory card.
- **X-Vision Optics Infrared technology is composed of wavelengths that the highly sensitive technology in the device can pick up and illuminate but the human eye cannot see. When looking directly at the infrared light, a faint red glow may be visible.**

Thank you for your purchase of the X-Vision Binocular. For additional information on X-Vision Optics, please visit our website [www.xvisionoptics.com](http://www.xvisionoptics.com) or visit us on Facebook at X-Vision Optics.
